

Production-ready Enterprise AI from the pioneers of RAG

contextual.ai

Enterprise Platform for Specialized RAG Agents

Easily build and deploy specialized RAG agents that augment expert knowledge work and generate transformative business impact

Generate real ROI with AI built for the enterprise

Automate complex and knowledge-intensive tasks, increase team productivity, and support strategic decisions with AI that understands the *context* of your business

DELIVER TRUSTWORTHY INTELLIGENCE

Provide accurate, auditable answers with in-line citations to source materials, all while enforcing strong security and data sovereignty compliance

STREAMLINE RESEARCH & ANALYSIS

Generate instant insights by analyzing vast repositories of market data, client documents, legal briefs, and industry reports

AUGMENT DUE DILIGENCE & REDUCE CLIENT RISK

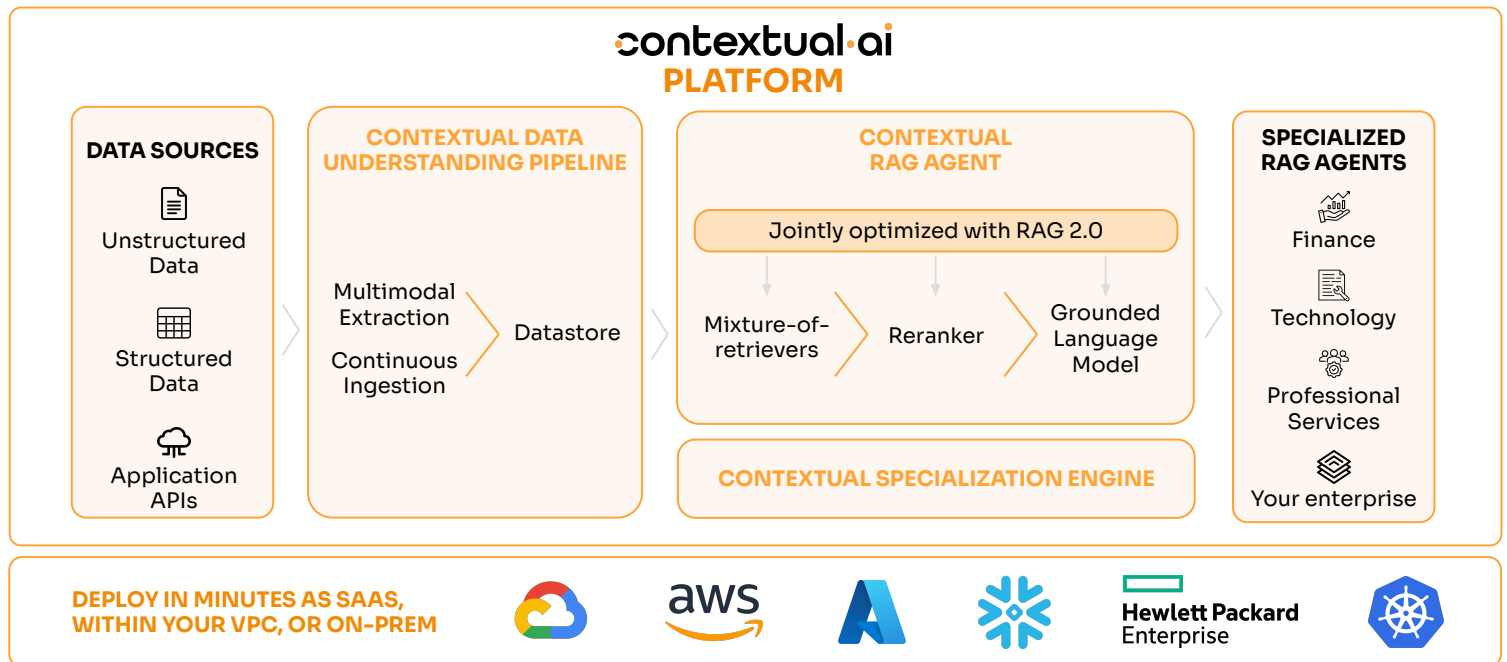

Strengthen due diligence and compliance by automatically scanning client documents for potential issues and legal obligations

ACCELERATE PROJECT TIMELINES

Automate the creation of complex client deliverables while maintaining precision and quality, reducing overall project timelines

Platform overview

An end-to-end enterprise solution for building specialized RAG agents

Trusted by industry leaders

WEALTH ADVISORY

Improve timeliness and depth of client recommendations by retrieving and synthesizing complex market reports, financial news, and internal documents

CUSTOMER ENGINEERING

Enhance team productivity and deliver better customer outcomes by retrieving and reasoning over massive volumes of complex technical documentation

SPORTS ANALYTICS

Enable customers to efficiently query Hudl's structured database containing performance statistics and key metrics for athlete recruitment

Benefits of Contextual AI

PRODUCTION-GRADE ACCURACY

The Contextual AI Platform helps AI teams quickly meet the stringent accuracy requirements needed to move specialized RAG agents from demo to production. With active retrieval and multihop reasoning capabilities, the platform delivers exceptional performance on complex tasks at enterprise scale.

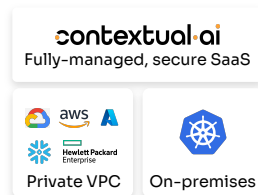

SUPPORT FOR ALL YOUR DATA

Our data understanding pipeline enables you to continuously ingest and retrieve critical enterprise data. We support unstructured documents with complex modalities, such as charts, diagrams, and code, along providing structured data retrieval and pre-built SaaS API integrations.

FLEXIBLE DEPLOYMENT OPTIONS

We offer flexible deployment options to meet your unique requirements. Our fully managed, secure SaaS delivers faster time-to-production, lower maintenance costs, and higher ROI. For customers in regulated industries, we also provide VPC and on-premises deployment.

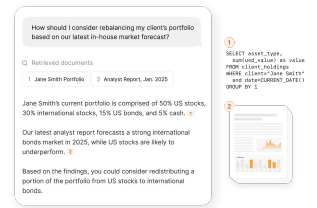

ENTERPRISE-GRADE SECURITY AND CONTROLS

The Contextual AI Platform is built for enterprise dependability. Contextual AI is SOC 2 certified and offers a comprehensive suite of security features to reach production safely and confidently, including enforcement of query-time entitlements and end-to-end encryption.

DESIGNED FOR END-USER TRUST

To promote user confidence and drive greater adoption, generated responses include fine-grained attributions to relevant, up-to-date data sources. Additionally, the platform flags statements with low groundedness automatically, protecting users from potential hallucinations.

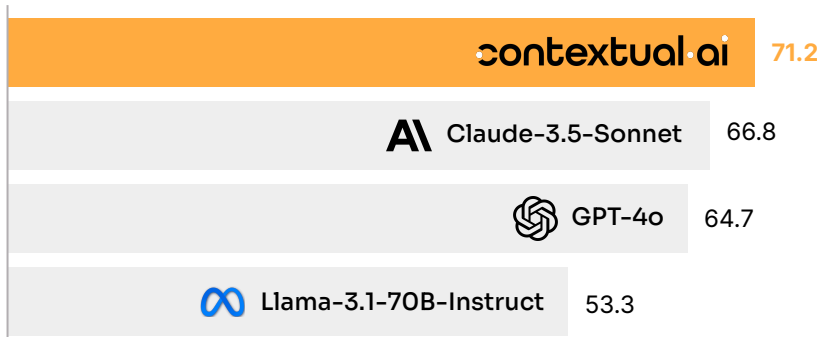

POWERFUL APIS AND SDKS

Platform APIs support AI teams through the entire agent development lifecycle, including data ingestion, tool integration, tuning, alignment, and evaluation. SDKs for Python, Javascript, and Typescript provide convenient libraries to enable teams to build faster.

State-of-the-art performance—out of the box

Average RAG-QA Arena performance score

END-TO-END OPTIMIZED FOR RAG

The Contextual AI Platform is powered by RAG 2.0, our innovative technology that jointly optimizes and tightly integrates state-of-the-art components as a single, unified system. This approach enables our platform to outperform competing RAG systems built using other leading models in end-to-end accuracy. With our specialization engine, the platform can deliver even greater performance across a variety of complex domains, such as finance, technology, and professional services.

About Contextual AI

Founded by the pioneers of RAG, Contextual AI is on a mission to change the way the world works through AI. Our enterprise platform for building specialized RAG agents delivers state-of-the-art performance out of the box, beating alternative RAG solutions built with leading frontier models. Contextual AI is trusted by innovative enterprises, such as HSBC, Qualcomm, and Hudl, to power their most complex and knowledge-intensive AI use cases.
